Scotts LAWN SEED (Regular Mixture)

Recognized as America's leading lawn seed. It produces fine turf of deep rooting perennial grasses. The liberal content of Creeping Bent assures a bright green lawn, thick and weed-free. Furnished without clover unless otherwise requested.

Scotts SHADE MIXTURE

A blend of special grasses for areas receiving sunshine less than half the day. It produces turf which harmonizes with that from Scotts (Regular) Lawn Seed. For lightly shaded lawns use equal parts of Regular and Shade Mixtures.

Scotts CREEPING BENT SEED

This is the pure strain, not mixed with different kinds of Bent and other grasses. Lawns of Scotts Creeping Bent possess that velvety, weed-free appearance which only the pure strain can produce. Creeping Bent grows in sun or partial shade. It is excellent for sowing into established lawns. Many fine lawns are made by sowing equal parts of Creeping Bent and Regular Mixture.

Scotts TURF BUILDER

An application of this special grass food on your lawn in early spring and fall each year insures a thicker stand and greater freedom from weeds. Its use before seeding new lawns causes quicker formation of permanent sod.

Turf Builder does not contain animal or other refuse. It is clean and free from objectionable odors. It goes two or three times as far as ordinary fertilizers and lasts much longer. Apply to established lawns at the low rate of 10 lbs. per 1000 square feet. Use twice as much before seeding new lawns.

Scotts CREEPING BENT STOLONS

These chopped roots and runners are planted instead of seed in building new lawns. They develop a thick, solid turf of remarkable beauty and texture in record time (six to eight weeks). The best planting period is fall. Special care is needed with late spring or early summer plantings. Stolons are available from May through November. Their perishable nature requires that they be planted within 48 hours after receipt. Order by square feet of area to be planted.
